

Assignment #1

Name: S. M Abubakar Zaidi

Cms: 1600 - 2021

Program: BSSE - 6

Subject: Professional Practices

a

The case study presents several ethical and moral issues:

1) Academic Integrity:

The student unintentionally gained access to unauthorized materials (solution to the assignment), which violates the academic integrity policy outlined in the course syllabus. Using these solutions would constitute academic misconduct.

2) Fairness and equity:

If the student uses the solution, it would give them an unfair advantage over their classmates, compromising the fairness and equity of the assessment process.

3) Trust and Responsibility:

The student was entrusted with the information accidentally shared by the professor. There is a moral obligation to handle this situation responsibly and ethically.

4) Consequences:

The potential consequences of academic misconduct such as failing the assignment, the course or even expulsion are significant and could have long lasting impact on the student's academic career.

5) Options for student:

i) Ethical Action:

The student should immediately inform the professor about possessing the solutions and refrain from using them or sharing them with others. This action upholds academic integrity and demonstrates ethical behavior.

ii) Unethical Option:

The student could choose to use the solutions or share them with classmates which would constitute academic misconduct and violate university's policy.

Recommended Action:

The student should take the ethical path and disclose the situation to the professor. This action preserves the integrity of the assessment process, maintains fairness for all students, and avoids potential severe consequences.

For the professor:

1) Acknowledge the mistake:

The professor should acknowledge the accidental upload of the solutions and take responsibility for the error.

2) Communicate with Students:

The professor should communicate the situation transparently to the class, emphasizing the importance of academic integrity and the potential consequences of using the solutions.

3) Modify or Replace Assignment:

The professor may consider modifying or replacing the assignment to maintain the integrity of the assessment process.

4) Investigate Potential Violations:

If the professor becomes aware of any student's using the solution, they should follow the university's procedure for addressing academic misconduct cases.

Recommended Action:

The professor should transparently communicate the situation, modify or replace the assignment, and address any potential violations fairly and consistently according to the university's policies.

Both the student and professor have ethical responsibility in this situation. The student should prioritize academic integrity by disclosing the situation and not using the solutions, while the professor should address the situation professionally, maintain fairness, and uphold the university's academic integrity policies.
